

Potter's Tropical Village

Reptiles – Getting to know you

What is a reptile? How do they move? What do they feel like? What do they eat? Take a look at our exciting and unique reptile collection. Get up close to some of our special friends. Learn amazing facts about each.

Then complete your voyage of discovery with a fact-finding mission.

Tropical Bird Characteristics

You won't find tropical birds in your backyard. Wild tropical birds are only found in very warm climates, but they are often raised as pets.

Toucans, parrots, parakeets and cockatoos are among the smartest birds on the planet. They can learn tricks and even copy your speech. Some can sing songs.

Spot what birds we have in our zoo and make a colour chart of all the colours you can see.

Reptiles Rendezvous

Get up close to some of our scaly friends. Learn about the special adaptations that these creatures have developed and what habitat they live in through close observation of these creatures, together with the opportunity to handle them too!

All prices include entry to Potter's World (including Play Tunnel).

Each session will be tailored to the group of children attending.
